Huma named for its successful and innovative approach to clinical trials in new UK government review di Adnkronos venerdì, 26 Maggio 2023 (Adnkronos) - NEW YORK and LONDON, May 25, 2023 /PRNewswire/ - **Huma Therapeutics** ("Huma"), a leading global digital health company, is named today as an exemplar of innovation in medical research in an independent review led by former Health Minister, Lord James O'Shaughnessy entitled Commercial clinical trials in the UK. The review was commissioned by the UK government to make recommendations to improve the clinical trials landscape in the UK. It proposes a range of 'significant actions' to bend the performance curve of trials dramatically, stating: 'The partnership between 2 very different UK life science success stories - AstraZeneca and Huma - shows the potential of the UK in this field'. The review includes a short case study

of our joint work¹. The review proposes that the government doubles the numbers of people taking part in commercial clinical trials in the next two years, and doubles it again by 2027. One of its 27 recommendations is the support and promotion of decentralised clinical trials, which are enabled by digital technology. It calls on stakeholders to develop guidance for decentralised and innovative trials by the end of 2023 to keep pace internationally. Decentralised clinical trials An estimated 80% of clinical trials do not meet initial patient enrollment goals and timelines². Decentralised trials can, says the review, increase public involvement in research and new therapies. Data can be collected from the comfort of participants' homes without disrupting their lives, reducing or eliminating the need to travel to clinical trial sites. Retention and adherence to

trial protocols through an improved experience can lower the overall cost of research. Decentralised trials also hold the promise of increasing diversity so that new medicines benefit people from all ethnicities and backgrounds. Dan Vahdat, Founder & CEO of Huma, said: "As a UK-headquartered company we really want to play our role in supercharging bodies such as the NHS and helping the UK re-establish its leadership position in clinical research. We have the innovative platform and clinical trials expertise to do so: our technology has supported some of the world's largest clinical trials from Covid19 to the Our Future Health study aiming to carry out research on 5 million participants. We join Lord O'Shaughnessy's call for all stakeholders to come together with both a renewed ambition and innovative mindset to bend the performance curve of clinical trials in the UK."

Huma's digital technology platforms support decentralised trials through an easy to configure, end-to-end solution, without hard coding, which allows rapid setup for clinical study requirements. This features pre-built modules including eConsent, ePRO and eCOA that can be adapted to protocols enabling quick setup of therapeutic study requirements.
